## **Keep Texas Beautiful Science and Math TEKS Correlation**

### **Lesson Correlation with the TEKS Grades 4-8**

The KAB “Clean Sweep USA” Interactive Web Site and Classroom Materials all focus on what is recyclable and not recyclable, understanding all of the different forms of waste reduction and waste management. The site contains 6 different themes in which students can investigate each of these topics, conduct research on the topic, conduct hands on labs and discussions in a group format and enjoy the interaction with each of the online Waste Reduction Games. These correlations are a reflection of the entire program as a whole. Even though KAB has slated these materials for grades 6-8, it appears that this program could be appropriate for Grades 4-8, thus correlations were made for each of those grades for Math and Science.
