EnviroScapes are engaging and effective landscape models that provide an interactive learning experience related to water quality and pollution prevention. The models create a real sense of understanding through experience and hands-on demonstration, which makes complex issues much clearer and helps people see how to prevent water pollution in their own communities.

The three-dimensional models (approx. 25" x 30" x 5") illustrate residential, recreational, agricultural, industrial and transportation areas -- all representing possible sources of water pollution. Children and adults learn about pollution prevention by using chemicals (drink mix) and loose soil (cocoa) throughout a typical community to see how their actions and those of others may affect our water quality. In addition to being a successful educational tool for students from Kindergarten through 12th grade, EnviroScape is also used by universities, soil and water conservation districts, city governments, utility companies, consultants, and civic and environmental groups.

Five different models are available: Urban, Bay, Landfill, Hazardous Waste, and Wetlands.

Each unit includes the supplies needed to run the activities, as well as a user's guide with glossary, which provides easy-to-use instructions to aid an instructor, group leader, or facilitator in presenting a demonstration. Each model is provided in a carrying case (with handles and wheels) for easy transport.

Users must be registered with the Texas Waterway Cleanup Program. The models will be loaned out per request as available. The borrower must pay the cost of shipping, which will vary per location. The typical cost will fall between \$40-\$50 for round-trip shipping based on standard delivery time – *feel free to ask KTB staff for an exact cost before placing your order.*

If you would like to use an EnviroScape model, please complete the form below (including the check boxes at the bottom) at least 3 weeks prior to the date it is needed.
